

# How do you secure 200+ IBM Apps with SafeNet HSMs? Just add GSKit!

Today businesses rely heavily on communications, transactions, and applications taking place in online channels. Businesses stand to lose substantially – both in revenue and reputation – when there is a breach of these online channels. Securing web-based communications and services is essential.

Enter IBM and SafeNet. With GSKit, over 200 IBM applications can be secured by crypto resources stored in Luna SA hardware. With such breadth of interoperability, you can protect nearly every IBM application with the same technology used to secure more than **\$1 TRILLION** in financial transactions every day.

Using IBM and SafeNet's products together optimizes the security and performance of online communications and transactions.

GSKit enables organizations to integrate SSL with a wide range of IBM applications, including the IBM WebSphere Suite and IBM Security Access Manager (ISAM). Luna SA serves as an SSL accelerator by taking encryption operations off of general use servers and contains it within the HSM. Additionally, it will securely store SSL keys and certificates, provide true random number generation and streamline key administration by performing both symmetric and asymmetric key functions on a single platform.

## LUNA SA – IBM INTEROPERABILITY WITH GSKIT

## BENEFITS OF IBM/SAFENET IMPLEMENTATION

- ▶ **Robust security.** Central policy enforcement software that enables security teams to effectively apply security policies across an enterprise.
- ▶ **Flexible interoperability.** Through GSKit, organizations can use cryptographic resources stored in highly secure Luna SA hardware for WebSphere—and more than 200 other IBM applications. Broad integration offers maximum flexibility for security policies and deployments to best meet your business needs.
- ▶ **High performance.** IBM offers high-performance servers that offer optimal throughput and responsiveness for users. Luna SA HSMs are purpose-built, highly scalable appliances that are capable of processing up to 7,000 RSA and 3,000 ECC transactions per second.
- ▶ **Support across products.** SafeNet supports additional IBM products including Tivoli Key Lifecycle Manager, PureData System, z/series mainframes.
