Centralize your crypto management HSM resources and reduce IT security infrastructure costs with SafeNet Crypto Command Center.

**Overview**

IT security departments and service providers can now quickly and securely expand IT capabilities, gain visibility, and streamline their infrastructure in physical, cloud, hybrid cloud and virtual environments with SafeNet Crypto Command Center. This is the market’s first solution to fully exploit the benefits of virtualization including reduced costs and innovation, by provisioning SafeNet Luna Network Hardware Security Modules (HSMs) without compromising security or compliance.

Together SafeNet Crypto Command Center and SafeNet Luna Network HSMs combine to form one complete, centralized solution for the management of your crypto HSM resources—a crypto hypervisor. Deliver on-demand provisioning of crypto resources for data protection in minutes instead of days, while allowing the application and data owners to maintain full control of encryption services and data.

Experience the benefits of centralized HSM management through the Premium license for full production environments, or a Freemium license that facilitates a rapid proof of concept in non-production environments.

**Crypto as a Service—Typical Challenges**

<table>
<thead>
<tr>
<th>Challenge</th>
<th>Effect</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lack of Security</td>
<td>Stakeholders implement inconsistent crypto deployments, increasing the risk of unauthorized data disclosure and fraud.</td>
<td>Standardization through crypto templates and automation eradicates the risk of non-compliance, and ensures security even in heavily regulated industries.</td>
</tr>
<tr>
<td>Inefficiency</td>
<td>Encryption islands are created by a variety of departments deploying point solutions. Additionally, as encryption needs grow, the demand to crypto enable applications increases, requiring additional resources and expertise.</td>
<td>Centralized management of crypto resources eliminates encryption islands. Automation, scalability, and delegation of responsibilities to non-crypto experts reduces costs and shortens time-to-market when implementing encryption solutions. Monitoring enables administrators to quickly determine the status of their appliances and be proactive in making capacity and maintenance decisions.</td>
</tr>
<tr>
<td>Complexity</td>
<td>Deploying crypto resources requires skilled resources and time.</td>
<td>Crypto service templates* remove the complexity and empower more users to use crypto in the enterprise. This reduces the need for traditionally CLI-intensive tasks and accelerates adoption.</td>
</tr>
<tr>
<td>Reduced Quality</td>
<td>Disruption of operations due to spikes in demand or security breaches, and lack of disaster recovery options.</td>
<td>High Availability (HA) ensures business continuity and consistent access to crypto. Continuous monitoring allows administrators to quickly determine the status of their appliances and be proactive in making capacity and maintenance decisions.</td>
</tr>
<tr>
<td>Lack of Visibility</td>
<td>Administrators cannot readily see the status or health of HSM device pools.</td>
<td>Monitoring provides consistent centralized view across the device pool, while email alerting keeps administrators informed of service-impacting events.</td>
</tr>
</tbody>
</table>

**SafeNet Crypto Command Center Benefits**

- Centralized crypto resources
- Maintain a standardized, consistent level of security through crypto templates and automation
- Visibility across device pools through easy monitoring and reporting
- Increased security and sharing of hardware through multi-tenancy with role separation
- Shared resources across multiple tenants
- Offer easy to implement Crypto as a Service
- Provision single or groups of HSM partitions in minutes vs hours, and lower total cost of ownership

**Highlighted Capabilities**

- Crypto as a Service: Enterprise and Service Providers can quickly and cost-effectively provision and manage single or groups of SafeNet Luna Network HSMs from one central location.
- Monitoring & Alerting: help administrators make capacity planning decisions, troubleshoot issues, receive email alerts on service-impacting events, and quickly support application owners.
- Route to Cloud: administer HSMs hosted in a hybrid cloud service platform without compromising security or compliance.
- Comprehensive Crypto Resource Reporting: benefit from centralized HA and resource management, and improved client visibility.
- Automation through Crypto Service Templates: easily create and deploy your own custom, repeatable crypto templates to enforce security and consistency.
- High Availability and Reliability: deploy crypto resources in high availability to minimize downtime.
- Remote CloudHSM Management: benefit from easy access and reduced total cost of ownership in a hybrid environment.
- Provision up to 100 partitions per device.
- Dynamic Resource Management: quickly spin up/spin down crypto resources.

*A Crypto Service is a SafeNet Luna Network HSM partition or a HA Group that is used for cryptographic applications such as code signing, database encryption, and PKI.
**SafeNet Crypto Command Center**

A complete crypto management solution offering the following advantages:

- Market's first true crypto hypervisor—a single, centralized platform for managing cryptographic resources.
- Monitor crypto resources, generate dynamic reports and always be up to date on the status of your HSM device pool.
- Tight integration with SafeNet Luna Network HSMs through REST API.
- Provision, manage, and administer SafeNet Luna Network HSMs on-premises, virtually, or in hybrid and cloud environments with this highly scalable solution.
- Deploy crypto resources quickly and efficiently to meet current and future encryption needs in minutes, not hours as was historically the case.
- Discovery of unmanaged crypto resources and partitions.
- Service Management—import unmanaged crypto resources, reassign device pool ownership, and dynamically reassign services.

**Available Solutions**

**SafeNet Crypto Command Center:**

1. **Premium:**
   - Base Offering—Provisioning
   - Enhanced Offering—Monitoring & Provisioning

2. **Freemium:**
   - Monitoring & Provisioning

**Supported Technologies:**

SafeNet Crypto Command Center can manage PED—and password-authenticated SafeNet Luna Network HSM devices that meet the following minimum requirements:

- **Application Software:**
  - SafeNet Luna Network HSM software 6.1, 6.2, 6.2.1, 7.0, 7.1, 7.2
  - REST API required

- **Firmware:**
  - 6.10.9 or higher

- **Backup:**
  - Cloning or Key Export

- **Authentication:**
  - PED—or Password-authenticated
  - PED—authenticated devices must support remote PED

**Model Comparison**

<table>
<thead>
<tr>
<th>Feature</th>
<th>Freemium Version</th>
<th>Premium Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of Crypto Services</td>
<td>Provision up to 20 crypto services</td>
<td>Provision an unlimited amount of crypto services</td>
</tr>
<tr>
<td>Local Database</td>
<td>Included and pre-configured</td>
<td>Configure either an internal or external PostgreSQL database</td>
</tr>
<tr>
<td>Customer Support</td>
<td>No customer support or service plan</td>
<td>Optional customer support and service plan available</td>
</tr>
<tr>
<td>Deployment Environment</td>
<td>Test environments only</td>
<td>Test and production environments</td>
</tr>
<tr>
<td>High Availability</td>
<td>Not available</td>
<td>HA configurations available</td>
</tr>
</tbody>
</table>

**About Gemalto’s SafeNet Identity and Data Protection Solutions**

Gemalto’s portfolio of SafeNet Identity and Data Protection solutions enables enterprises, financial institutions and governments to protect data, digital identities, payments and transactions—from the edge to the core. Our solutions take a data-centric approach to security with innovative encryption methods, best-in-class crypto management, and strong authentication and identity management to help customers protect what matters, where it matters.
