

PRODUCT BRIEF

SafeNet Network Logon

In recent years, there has been a rise in the number of security incidents that have resulted in the compromise of intellectual property, data breaches, and identity theft. There is growing concern among IT leaders over the rise in corporate espionage and Advanced Persistent Threats (APTs) that originate from unauthorized local network access. Relying on simple passwords to protect employees' computers and privileged workstations could put your organization at risk.

Ensure Secure Access to PCs and Local Networks

SafeNet Network Logon offers IT teams a full range of options to secure local network access. These include a choice of certificate-based and OTP strong authentication methods that operate in off-line and connected mode. SafeNet Network Logon also offers the ability to create unique Windows domain logon profiles that can be securely stored on USB devices. SafeNet's broad choice of hardware and software form factors allow organizations to optimize secure access by deploying different authentication devices based on users' risk profiles and usability needs.

Centralized Management and a Broad Selection of Authenticators

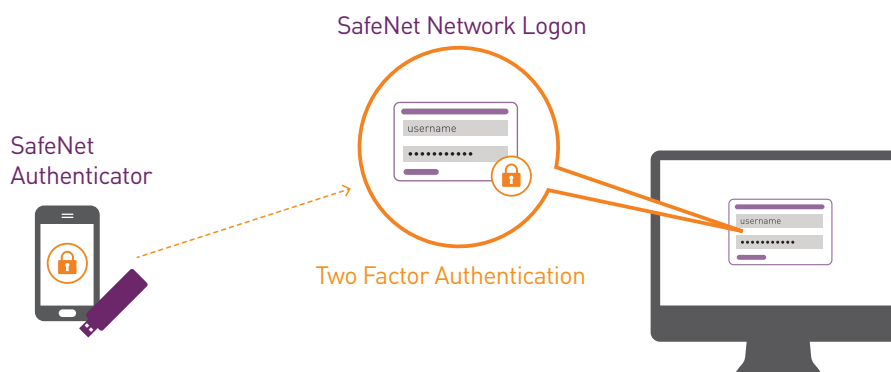

SafeNet Network Logon supports SafeNet's entire range of hardware and software OTP and certificate-based authenticators. It is fully integrated with SafeNet Authentication Manager, which provides IT administrators with a full suite of authentication management capabilities, including authenticator deployment, enrollment revocation, user self-service password reset, backup/restoration of user credentials, and a solution for users who lose or forget their tokens.

Benefits

- > Offers IT teams the choice of several authentication methods, technologies, and form factors to secure local network access
- > Allows organizations to centrally manage local and remote access with a single authentication server and implement more stringent security for privileged users
- > Allows the generation of temporary tokens for users who lose or forget their tokens (when used together with SafeNet Authentication Manager and SafeNet Authentication Client)
- > Offers network password management and administration capabilities, allowing users to manage their own devices

When using certificate-based USB devices, it is possible to:

- > Store multiple complex passwords and several profiles on a single authenticator, enabling users to access multiple resources with a single token
- > Create and store unique user profiles that generate randomized Windows domain passwords. By so doing, organizations can implement two-factor authentication for local network access without having to deploy a full PKI infrastructure

Technical Specifications

Authentication Methods	<ul style="list-style-type: none">> OTP (Time and Event)> Certificate-based authentication
OTP Modes	<ul style="list-style-type: none">> Connected> Offline> Multi-Domain
Supported Authentication Devices	<ul style="list-style-type: none">> Certificate -based smartcards> USB devices> OTP software tokens> OTP hardware tokens> OOB SMS
Supported Operating Systems	<ul style="list-style-type: none">> Windows Server 2003/R2> Windows Server 2008/R2> Windows 7> Windows XP/Vista (32- and 64-bit)> Windows 8> Windows Server 2012
Required Software	<ul style="list-style-type: none">> SafeNet Authentication Manager, when using OTP authentication
Supported Authenticators	<ul style="list-style-type: none">> SafeNet eToken 7300> SafeNet eToken 5110> SafeNet eToken 4100> SafeNet IDPrime MD 830> SafeNet IDPrime MD 840> SafeNet eToken PASS> SafeNet MobilePASS> SafeNet eToken Virtual

About Gemalto's SafeNet Identity and Data Protection Solutions

Through its acquisition of SafeNet, Gemalto offers one of the most complete portfolios of enterprise security solutions in the world, enabling its customers to enjoy industry-leading protection of data, digital identities, payments and transactions – from the edge to the core. Gemalto's newly expanded portfolio of SafeNet Identity and Data Protection solutions enables enterprises across many verticals, including major financial institutions and governments, to take a data-centric approach to security by utilizing innovative encryption methods, best-in-class crypto management techniques, and strong authentication and identity management solutions to protect what matters, where it matters. Through these solutions, Gemalto helps organizations achieve compliance with stringent data privacy regulations and ensure that sensitive corporate assets, customer information, and digital transactions are safe from exposure and manipulation in order to protect customer trust in an increasingly digital world.
