IDBridge **K30**

Secure token in portable USB format

The IDBridge K30 is a compact, USB device that offers multi-application dynamic smart card functionality. It can be used with any USB connection for Identity and Access Management applications such as network authentication, digital signatures and other services based on Public Key Infrastructure (PKI).
IDBridge K30

Smart card security with USB convenience
The IDBridge K30 combines smart card security with USB convenience to deliver the following benefits:

- **Highly secure** – advanced protection is enabled by two factor authentication: something users have – the device, and something they know – their PIN.
- **Universal access** – secure logical access control services can be used with any system having a USB connection. Support for major desktop operating systems – Windows, Mac and Linux – standard USB specifications means the device works with virtually any network connection.
- **Easy to use** – users simply insert the device into a USB port and enter a PIN to access onboard security applications.
- **Customizable** – USB tokens can be customized with a customer’s logo and other branding

**Embedded reader**
The embedded smart card reader in the IDBridge K30 is especially convenient in situations that require secure authentication when smart card readers are not available. With IDBridge K30, only authorized users can access the network and sensitive information, conduct secure transactions and digitally sign documents.

**Two factor authentication**
USB IDBridge K30 features strong authentication based on two factors: the token itself and a PIN, providing an extra level of security for the most sensitive applications. The PIN ensures the holder of the device is its legitimate owner. The IDBridge K30 offers all the power of a multi-application smart card in a USB form factor, making it an ideal solution for organizations that require a combination of security, portability, robustness and convenience.

**Empower users with a family of security applications**
The IDBridge K30 offers increased flexibility and can be provisioned with IDGo Middleware to support a broad range of onboard security applications. IDGo Middleware is a smart card-based crypto-library that integrates Gemalto smart card cryptography with Public Key Infrastructure (PKI) services to bring the highest level of security, portability and convenience to logical access control solutions.

The IDBridge K30 is designed for secure storage of cryptographic keys and certificates, strong authentication, encryption, and digital signature of email and data. It also supports non-repudiation, a crucial feature for proof of financial transactions.

Typical usage includes:
- Network logon
- Computer access control
- Data protection
- Trusted document exchange
- Secure Internet and remote access
- e-Commerce and online banking

**Operating systems supported**
Windows 98, 98SE, Me, 2000, XP, Server 2003, x64 editions, Vista 32, 64 bits; Seven, Server 2008R2
- Win CE 4.1, 4.2, 5.0, 6.0
- Linux Kernel 2.6 and higher
- Mac OS X Panther, Tiger, Leopard 32 editions
- Support for Solaris, XP embedded

**APIs**
- Microsoft PC/SC environment with associated drivers
- Host Interface
  - Plug and Play
  - CCID (Chip Card Interface Device)
- USB 2.0 full speed (12 Mbps)

**Human interface**
- LED one color (Blue), dual state (blinking: waiting card insertion; ON: card reading / writing)

**Environmental**
- CE, FCC part 15 Class B
- EN 60950 / UL 950 / CSA 950
- Operating: +0°C / -70°C
- Storage: -20°C / +85°C
- ROHS compliant, WEEE marking

**Electrostatic Discharge**
- +/- 8kV direct air discharge
- +/- 4kV indirect contact discharge
