Third-Party Software Acknowledgement

This document is intended to help users of SafeNet products when working with third-party software, such as Wrike.

Material from third-party software is being used solely for the purpose of making instructions clear. Screen images and content obtained from third-party software will be acknowledged as such.

Description

SafeNet Authentication Service delivers a fully automated, versatile, and strong authentication-as-a-service solution.

With no infrastructure required, SafeNet Authentication Service (SAS) provides smooth management processes and highly flexible security policies, token choice, and integration APIs.

Wrike combines project management with a real time work space for collaboration, discussion, and document sharing. Wrike is a real-time workspace, where teams collaborate to get the job done. Enterprise user can access Wrike with corporate credentials if SAML-based SSO (SSO/SAML integration) is enabled for their subscription. Wrike supports SAML2.0 as a service provider.

This document describes how to:

- Deploy multi-factor authentication (MFA) options in Wrike using SafeNet one-time password (OTP) authenticators managed by SafeNet Authentication Service.
- Configure SAML authentication in Wrike using SafeNet Authentication Service as an identity provider.

It is assumed that the Wrike environment is already configured and working with static passwords prior to implementing multi-factor authentication using SafeNet Authentication Service.

Wrike can be configured to support multi-factor authentication in several modes. The SAML authentication will be used for the purpose of working with SafeNet Authentication Service.

Applicability

The information in this document applies to:

- **SafeNet Authentication Service (SAS)**—SafeNet’s cloud-based authentication service
- **SafeNet Authentication Service – Service Provider Edition (SAS-SPE)**—A server version that is used by Service providers to deploy instances of SafeNet Authentication Service
- **SafeNet Authentication Service – Private Cloud Edition (SAS-PCE)**—A server version that is used to deploy the solution on-premises in the organization

Environment

The integration environment that was used in this document is based on the following software versions:

- **SafeNet Authentication Service – Private Cloud Edition (SAS-PCE)** — Mention only if SAS-PCE is relevant. Add version number to the SAS-PCE.
- **Wrike**
Audience

This document is targeted to system administrators who are familiar with Wrike, and are interested in adding multi-factor authentication capabilities using SafeNet Authentication Service.

SAML Authentication using SafeNet Authentication Service Cloud

SafeNet Authentication Service (SAS) Cloud provides a service for SAML authentication that is already implemented in the SAS Cloud environment and can be used without any installation.

SAML Authentication using SafeNet Authentication Service-SPE and SafeNet Authentication Service-PCE

In addition to the pure cloud-based offering, SafeNet Authentication Service (SAS) comes with two on-premises versions:

- **SafeNet Authentication Service – Service Provider Edition (SPE)**—An on-premises version of SafeNet Authentication Service targeted at service providers interested in hosting SAS in their data center.

- **SafeNet Authentication Service – Private Cloud Edition (PCE)**—An on-premises version of SafeNet Authentication Service targeted at organizations interested in hosting SAS in their private cloud environment.

For both on-premises versions, SAS can be integrated with the Shibboleth infrastructure, which uses a special on-premises agent called SafeNet Authentication Service Agent for Shibboleth.

For more information on how to install and configure the SafeNet Authentication Service Agent for Shibboleth, refer to the SafeNet Support Portal.
SAML Authentication Flow using SafeNet Authentication Service

SafeNet Authentication Service (SAS) communicates with a large number of service providers and cloud-based services solutions using the SAML protocol.

The image below describes the dataflow of a multi-factor authentication transaction for Wrike.

1. A user attempts to log on to Wrike. The user is redirected to SafeNet Authentication Service. SAS collects and evaluates the user's credentials.
2. SAS returns a response to Wrike, accepting or rejecting the user's authentication request.

SAML Prerequisites

To enable SafeNet Authentication Service (SAS) to receive SAML authentication requests from Wrike, ensure that the end users can authenticate from the Wrike environment with a static password.

Configuring Wrike

You cannot access the IDP configuration console of Wrike. To configure SAS cloud as IDP in Wrike, please contact the Wrike support team (email ID: support@team.wrike.com) and provide the SAS metadata. The Wrike support team will configure the IDP settings for you.

Downloading the SafeNet Authentication Service Metadata

Browse to the https://idp1.cryptocard.com/idp/shibboleth URL. The SafeNet Authentication Service (SAS) metadata will be downloaded automatically. Save it locally on your machine.

Downloading the SafeNet Identity Provider Certificate

Browse to the https://cloud.safenet-inc.com/console/cert/idp.crt URL. The SafeNet identity provider certificate will be downloaded automatically. Save it locally on your machine.
Configuring SafeNet Authentication Service

The deployment of multi-factor authentication using SafeNet Authentication Service (SAS) with Wrike using SAML authentication requires:

- Synchronizing Users Stores to SafeNet Authentication Service, page 7
- Assigning an Authenticator in SafeNet Authentication Service, page 7
- Adding Wrike as a Service Provider (SP) in SafeNet Authentication Service, page 8
- Enabling SAML Services in SafeNet Authentication Service, page 11

Synchronizing Users Stores to SafeNet Authentication Service

Before SafeNet Authentication Service (SAS) can authenticate any user in your organization, you need to create a user store in SAS that reflects the users that would need to use multi-factor authentication. User records are created in the SAS user store using one of the following methods:

- Manually, one user at a time using the Create User shortcut
- Manually, by importing one or more user records via a flat file
- Automatically, by synchronizing with your Active Directory/LDAP server using the SAS Synchronization Agent

For further details on importing users to SafeNet Authentication Service, refer to “Creating Users” in the SafeNet Authentication Service Subscriber Account Operator Guide:

All SafeNet Authentication Service documentation can be found on the SafeNet Knowledge Base site.

Assigning an Authenticator in SafeNet Authentication Service

SafeNet Authentication Service (SAS) supports a number of authentication methods that can be used as a second authentication factor for users authenticating through Wrike.

The following authenticators are supported:

- eToken PASS
- RB-1 keypad token
- KT-4 token
- SafeNet GOLD
- SMS tokens
- MP-1 software token
- GrIDsure
- MobilePASS
Authenticators can be assigned to users in two ways:

- **Manual provisioning**—Assign an authenticator to users one at a time.
- **Provisioning rules**—The administrator can set provisioning rules in SAS so that the rules will be triggered when group memberships and other user attributes change. An authenticator will be assigned automatically to the user.

Refer to “Provisioning” in the *SafeNet Authentication Service - Subscriber Account Operator Guide* to learn how to provision the different authentication methods to the users in the SAS user store.

### Adding Wrike as a Service Provider (SP) in SafeNet Authentication Service

Add a service provider entry in the SafeNet Authentication Service (SAS) **SAML Service Providers** module to prepare it to receive SAML authentication requests from Wrike. You will need the Wrike metadata. Open the [https://www.wrike.com/saml/metadata](https://www.wrike.com/saml/metadata) link in a web browser to download the Wrike metadata file.

**To add Wrike as a Service Provider in SafeNet Authentication Service (SAS):**

1. Log in to the SafeNet Authentication Service console with an Operator account.
2. Click the **COMMS** tab, and then click **SAML Service Providers**.

3. In the **SAML Service Providers** module, click the **SAML 2.0 Settings** link.

4. Click **Add**.
5. In the **Add SAML 2.0 Settings** section, complete the following fields, and then click **Apply**:

<table>
<thead>
<tr>
<th>Friendly Name</th>
<th>Enter the Wrike name.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>SAML 2.0 Metadata</strong></td>
<td>Select <strong>Upload Existing Metadata File</strong>. Click <strong>Choose File</strong> to search for and select the Service Provider’s metadata file, and then click <strong>Open</strong>.</td>
</tr>
</tbody>
</table>

![Add SAML 2.0 Settings](image)

**NOTE:** The remaining options are used to customize the appearance of the logon page presented to the user. For more information on logon page customization, refer “Configure SAML Service” in the **SAML Configuration Guide**: https://safenet.gemalto.com/resources/integration-guide/data-protection/Safenet_Authentication_Service/Safenet_Authentication_Service__SAML_Authentication_Quick_Start_Guide/

---

Under **Return Attributes**, add the following attributes, and then click **Apply**:

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td><a href="http://schemas.microsoft.com/ws/2008/06/identity/claims/windowsaccount">http://schemas.microsoft.com/ws/2008/06/identity/claims/windowsaccount</a> name</td>
<td>According to ThirdParty Product Requirements</td>
</tr>
<tr>
<td><a href="http://schemas.xmlsoap.org/ws/2005/05/identity/claims/emailaddress">http://schemas.xmlsoap.org/ws/2005/05/identity/claims/emailaddress</a></td>
<td>According to ThirdParty Product Requirements</td>
</tr>
<tr>
<td><a href="http://schemas.xmlsoap.org/claims/EmailAddress">http://schemas.xmlsoap.org/claims/EmailAddress</a></td>
<td>According to ThirdParty Product Requirements</td>
</tr>
<tr>
<td><a href="http://schemas.xmlsoap.org/ws/2005/05/identity/claims/name">http://schemas.xmlsoap.org/ws/2005/05/identity/claims/name</a></td>
<td>According to ThirdParty Product Requirements</td>
</tr>
<tr>
<td><a href="http://schemas.xmlsoap.org/ws/2005/05/identity/claims/givenname">http://schemas.xmlsoap.org/ws/2005/05/identity/claims/givenname</a></td>
<td>According to ThirdParty Product Requirements</td>
</tr>
<tr>
<td><a href="http://schemas.xmlsoap.org/claims/CommonName">http://schemas.xmlsoap.org/claims/CommonName</a></td>
<td>According to ThirdParty Product Requirements</td>
</tr>
</tbody>
</table>
Enabling SAML Services in SafeNet Authentication Service

After Wrike has been added to SafeNet Authentication Service (SAS) as a service provider, the users should be granted permission to use this service provider with SAML authentication.

There are two methods to enable the user to use the service provider:

- Manually, one user at a time, using SAML Services module
- Automatically, by defining groups of users, using SAML Provisioning Rules
Using the SAML Services Module

Manually enable a single user to authenticate against one or more configured SAML Service providers.

1. Log in to the SafeNet Authentication Service console with an Operator account.

2. Click the ASSIGNMENT tab, and then search for the required user.

3. Click the appropriate user in the User ID column.
4. Click **SAML Services**.

5. Click **Add**.

6. Under **Add SAML Service**, do the following:
   a. From the **Service** menu, select the Wrike service provider.
   b. In **SAML Login ID** field, select the type of login ID (User ID, E-mail, or Custom) to be sent as **Email** to Wrike in the response.
   c. Click **Add**.
The user can now authenticate to Wrike using SAML authentication.

### Using SAML Provisioning Rules

Use this module to enable groups of users to authenticate to SAML service providers.

1. Log in to the SafeNet Authentication Service console with an Operator account.

2. Click the POLICY tab, and then click **Automation Policies**.
3. Click the **SAML Provisioning Rules** link.

![Automation Policies](image)

4. Click **New Rule**.

![Automation Policies](image)
5. Configure the following fields, and then click **Add**:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Rule Name</strong></td>
<td>Enter a name for the rule.</td>
</tr>
<tr>
<td><strong>User is in container</strong></td>
<td>Users affected by this rule must be in the selected container.</td>
</tr>
<tr>
<td><strong>Groups</strong></td>
<td>The <strong>Virtual Server groups</strong> box lists all groups. Click the user groups that will be affected by the rule, and then click the right arrow to move it to the <strong>Used by rule</strong> box.</td>
</tr>
<tr>
<td><strong>Parties</strong></td>
<td>The <strong>Relying Parties</strong> box lists all service providers. Click the service providers that the groups of users will authenticate to, and then click the right arrow to move it to <strong>Rule Parties</strong> box.</td>
</tr>
<tr>
<td><strong>SAML Login ID</strong></td>
<td>Select <strong>E-mail</strong>. The E-mail will be returned to the service provider in the SAML assertion.</td>
</tr>
</tbody>
</table>

---

**Running the Solution**

Before running this section, user should be subscribed with Wrike enterprise account. User is enrolled with Grid sure token on SafeNet Authentication Service (SAS).

1. In a web browser, open the following URL:

   *wrike.com/sso*
2. On the Wrike **Single Sign On (SSO)** window, enter your company’s (SSO) E-mail ID, and then click **Log In**.

![Wrike SSO login page](image)

*(The screen image above is from Wrike software. Trademarks are the property of their respective owners.)*

3. You will be redirected to the SAS login page. In the **User Name** field, enter your SAS User ID, and then click on **Login**.

![SafeNet Authentication Service login page](image)
4. In the **Passcode** field, enter your Personal Identification Pattern (PIP), and then click **Login**.

![Login screen](image)

After successful authentication, you will be able to access the Wrike workspace.

Support Contacts

If you encounter a problem while installing, registering, or operating this product, please make sure that you have read the documentation. If you cannot resolve the issue, contact your supplier or Gemalto Customer Support. Gemalto Customer Support operates 24 hours a day, 7 days a week. Your level of access to this service is governed by the support plan arrangements made between Gemalto and your organization. Please consult this support plan for further information about your entitlements, including the hours when telephone support is available to you.
