All information herein is either public information or is the property of and owned solely by Gemalto NV. and/or its subsidiaries who shall have and keep the sole right to file patent applications or any other kind of intellectual property protection in connection with such information.

Nothing herein shall be construed as implying or granting to you any rights, by license, grant or otherwise, under any intellectual and/or industrial property rights of or concerning any of Gemalto’s information.

This document can be used for informational, non-commercial, internal and personal use only provided that:

- The copyright notice below, the confidentiality and proprietary legend and this full warning notice appear in all copies.
- This document shall not be posted on any network computer or broadcast in any media and no modification of any part of this document shall be made.

Use for any other purpose is expressly prohibited and may result in severe civil and criminal liabilities.

The information contained in this document is provided “AS IS” without any warranty of any kind. Unless otherwise expressly agreed in writing, Gemalto makes no warranty as to the value or accuracy of information contained herein.

The document could include technical inaccuracies or typographical errors. Changes are periodically added to the information herein. Furthermore, Gemalto reserves the right to make any change or improvement in the specifications data, information, and the like described herein, at any time.

Gemalto hereby disclaims all warranties and conditions with regard to the information contained herein, including all implied warranties of merchantability, fitness for a particular purpose, title and non-infringement. In no event shall Gemalto be liable, whether in contract, tort or otherwise, for any indirect, special or consequential damages or any damages whatsoever including but not limited to damages resulting from loss of use, data, profits, revenues, or customers, arising out of or in connection with the use or performance of information contained in this document.

Gemalto does not and shall not warrant that this product will be resistant to all possible attacks and shall not incur, and disclaims, any liability in this respect. Even if each product is compliant with current security standards in force on the date of their design, security mechanisms' resistance necessarily evolves according to the state of the art in security and notably under the emergence of new attacks. Under no circumstances, shall Gemalto be held liable for any third party actions and in particular in case of any successful attack against systems or equipment incorporating Gemalto products. Gemalto disclaims any liability with respect to security for direct, indirect, incidental or consequential damages that result from any use of its products. It is further stressed that independent testing and verification by the person using the product is particularly encouraged, especially in any application in which defective, incorrect or insecure functioning could result in damage to persons or property, denial of service or loss of privacy.

Third-Party Software Acknowledgement

This document is intended to help users of SafeNet products when working with third-party software, such as Confluence.

Material from third-party software is being used solely for the purpose of making instructions clear. Screen images and content obtained from third-party software will be acknowledged as such.

Description

SafeNet Authentication Service delivers a fully automated, versatile, and strong authentication-as-a-service solution.

With no infrastructure required, SafeNet Authentication Service provides smooth management processes and highly flexible security policies, token choice, and integration APIs.

Confluence is team collaboration software developed and marketed by Atlassian. Confluence is a simple and powerful wiki that allows groups or departments to share information. It is organized into areas called spaces that contain contact pages, attachments, and other types of content that can be viewed and edited by users.

This document describes how to:

- Configure SAML authentication in Confluence using SafeNet Authentication Service as an identity provider.

It is assumed that the Confluence environment is already configured and working with static passwords prior to implementing multi-factor authentication using SafeNet Authentication Service.

Confluence can be configured to support multi-factor authentication in several modes. The SAML authentication will be used for the purpose of working with SafeNet Authentication Service.

Applicability

The information in this document applies to:

- **SafeNet Authentication Service (SAS)**—SafeNet's cloud-based authentication service
- **SafeNet Authentication Service – Service Provider Edition (SAS-SPE)**—A server version that is used by Service providers to deploy instances of SafeNet Authentication Service
- **SafeNet Authentication Service – Private Cloud Edition (SAS-PCE)**—A server version that is used to deploy the solution on-premises in the organization

Environment

The integration environment that was used in this document is based on the following software versions:

- **SafeNet Authentication Service – Private Cloud Edition (SAS-PCE)** — Mention only if SAS-PCE is relevant. Add version number to the SAS-PCE.
- **Confluence**—Version 5.6.5 x64
- **SAML Single Sign-On add-on for JIRA**—(samlsso-JIRA-0.9.4.jar)
**Audience**

This document is targeted to system administrators who are familiar with Confluence, and are interested in adding multi-factor authentication capabilities using SafeNet Authentication Service.

**SAML Authentication using SafeNet Authentication Service Cloud**

SafeNet Authentication Service (SAS) Cloud provides a service for SAML authentication that is already implemented in the SAS Cloud environment and can be used without any installation.

![SAML Authentication Cloud Diagram](image)

**SAML Authentication using SafeNet Authentication Service-SPE and SafeNet Authentication Service-PCE**

In addition to the pure cloud-based offering, SafeNet Authentication Service (SAS) comes with two on-premises versions:

- **SafeNet Authentication Service – Service Provider Edition (SPE)**—An on-premises version of SafeNet Authentication Service targeted at service providers interested in hosting SAS in their data center.

- **SafeNet Authentication Service – Private Cloud Edition (PCE)**—An on-premises version of SafeNet Authentication Service targeted at organizations interested in hosting SAS in their private cloud environment.

For both on-premises versions, SAS can be integrated with the Shibboleth infrastructure, which uses a special on-premises agent called SafeNet Authentication Service Agent for Shibboleth.

For more information on how to install and configure the SafeNet Authentication Service Agent for Shibboleth, refer to the SafeNet Support Portal.

**SAML Authentication Flow using SafeNet Authentication Service**

SafeNet Authentication Service (SAS) communicates with a large number of service providers and cloud-based services solutions using the SAML protocol.

The image below describes the dataflow of a multi-factor authentication transaction for Confluence.
1. A user attempts to log on to Confluence. The user is redirected to SafeNet Authentication Service. SAS collects and evaluates the user’s credentials.

2. SAS returns a response to Confluence, accepting or rejecting the user’s authentication request.

### SAML Prerequisites

To enable SafeNet Authentication Service (SAS) to receive SAML authentication requests from Confluence, ensure that the end users can authenticate from the Confluence environment with a static password.

### Configuring Confluence

To add SafeNet Authentication Service (SAS) as an Identity Provider in Confluence:

- Installing the SAML Single Sign-On Plugin, page 6
- Configuring SAS as an Identity Provider in Confluence, page 9

### Installing the SAML Single Sign-On Plugin

The SAML single sign-on plugin turns Confluence into the SAML 2.0 Service Provider, delegating authentication to the SAML Identity Provider.

Download the SAML single sign-on plugin from Atlassian using the following link: https://confluence.atlassian.com/display/UPM/Finding+new+add-ons
To install the SAML SSO plugin:

3. Open Confluence in a web browser.

4. On the **Confluence Log in** window, enter the administrator credentials and then click **Log in**.

   (The screen image above is from Atlassian®. Trademarks are the property of their respective owners.)

5. On the **Confluence Dashboard** window, click **Administration ( recreate ) > Add-ons**.

   (The screen image above is from Atlassian®. Trademarks are the property of their respective owners.)

6. On the **Administrator Access** window, enter the administrator password, and then click **Confirm**.

   (The screen image above is from Atlassian®. Trademarks are the property of their respective owners.)
7. On the **Confluence Admin** window, in the right pane, click **Upload add-on**.

![Confluence Admin window](image)

(The screen image above is from Atlassian®. Trademarks are the property of their respective owners.)

8. On the **Upload add-on** window, click **Browse**, select the downloaded SAML sign-on add-on JAR file, and then click **Upload**.

![Upload add-on window](image)

(The screen image above is from Atlassian®. Trademarks are the property of their respective owners.)

A confirmation message is displayed when the add-on is successfully installed.

![Installed and ready to go](image)

(The screen image above is from Atlassian®. Trademarks are the property of their respective owners.)
NOTE: For this integration, the SAML Single Sign-On for JIRA plugin is used.

Configuring SAS as an Identity Provider in Confluence

9. On the Confluence Admin window, in the right pane, under User-installed add-ons, expand SAML SingleSignOn for JIRA.

(The screen image above is from Atlassian®. Trademarks are the property of their respective owners.)
11. On the **SAMLSSO plugin configuration** window, enter the following SSO settings to configure SAS as an Identity Provider, and then click **Submit Query**.

| **IdP URL** | Enter the SafeNet Identity Provider redirect URL. For example, https://idp1.cryptocard.com/idp/profile/SAML2/Redirect/SSO |
| **Login Page URL** | If the SAML login fails, a link to the username/password login page is displayed on the error page. For Confluence, this page is `/login.action`. |
| **Redirect login requests** | Select this option to redirect login requests to this plugin instead of the login page. |
| **IdP Certificate** | Download the SafeNet Identity Provider certificate from the SAS console and paste the certificate in base64-encoded format, including the **BEGIN** and **END CERTIFICATE** lines. |

*(The screen image above is from Atlassian®. Trademarks are the property of their respective owners.)*
Configuring SafeNet Authentication Service

The deployment of multi-factor authentication using SafeNet Authentication Service (SAS) with Confluence using SAML authentication requires:

- Synchronizing Users Stores to SafeNet Authentication Service, page 11
- Assigning an Authenticator in SafeNet Authentication Service, page 11
- Adding Confluence as a Service Provider (SP) in SafeNet Authentication Service, page 12
- Enabling SAML Services in SafeNet Authentication Service, page 17

Synchronizing Users Stores to SafeNet Authentication Service

Before SafeNet Authentication Service (SAS) can authenticate any user in your organization, you need to create a user store in SAS that reflects the users that would need to use multi-factor authentication. User records are created in the SAS user store using one of the following methods:

- Manually, one user at a time using the Create User shortcut
- Manually, by importing one or more user records via a flat file
- Automatically, by synchronizing with your Active Directory/LDAP server using the SAS Synchronization Agent

For further details on importing users to SafeNet Authentication Service, refer to “Creating Users” in the SafeNet Authentication Service Subscriber Account Operator Guide:

All SafeNet Authentication Service documentation can be found on the SafeNet Knowledge Base site.

Assigning an Authenticator in SafeNet Authentication Service

SafeNet Authentication Service (SAS) supports a number of authentication methods that can be used as a second authentication factor for users authenticating through Confluence.

The following authenticators are supported:

- eToken PASS
- RB-1 keypad token
- KT-4 token
- SafeNet GOLD
- SMS tokens
- MP-1 software token
- GrIDsure
- MobilePASS
Authenticators can be assigned to users in two ways:

- **Manual provisioning**—Assign an authenticator to users one at a time.
- **Provisioning rules**—The administrator can set provisioning rules in SAS so that the rules will be triggered when group memberships and other user attributes change. An authenticator will be assigned automatically to the user.

Refer to “Provisioning” in the *SafeNet Authentication Service - Subscriber Account Operator Guide* to learn how to provision the different authentication methods to the users in the SAS user store.

**Adding Confluence as a Service Provider (SP) in SafeNet Authentication Service**

Add a service provider entry in the SafeNet Authentication Service (SAS) **SAML Service Providers** module to prepare it to receive SAML authentication requests from Confluence. You will need the `<metadata/Issuer ID and assertion consumer URL location of Confluence>`.

**To download the Confluence metadata:**

12. In a web browser, open the [http://<confluence-url>/plugins/servlet/samlsso/admin](http://<confluence-url>/plugins/servlet/samlsso/admin) URL, and then enter administrator credentials to log in.

13. On the **SAMLSSO plugin configuration** window, click **SAML Metadata** to download the XML file onto your local machine.

(The screen image above is from Atlassian®. Trademarks are the property of their respective owners.)
To add Confluence as a Service Provider in SafeNet Authentication Service:

1. Log in to the SafeNet Authentication Service console with an Operator account.

2. Click the COMMS tab, and then click SAML Service Providers.

3. In the SAML Service Providers module, click the SAML 2.0 Settings link.

4. Click Add.
<table>
<thead>
<tr>

Confluence is added as a service provider in the system.
Enabling SAML Services in SafeNet Authentication Service

After Confluence has been added to SafeNet Authentication Service (SAS) as a service provider, the users should be granted permission to use this service provider with SAML authentication.

There are two methods to enable the user to use the service provider:

- Manually, one user at a time, using SAML Services module
- Automatically, by defining groups of users, using SAML Provisioning Rules

Using the SAML Services Module

Manually enable a single user to authenticate against one or more configured SAML Service providers.

1. Log in to the SafeNet Authentication Service console with an Operator account.

   ![SafeNet Authentication Service Console](image)

2. Click the **ASSIGNMENT** tab, and then search for the required user.

   ![Search User Interface](image)

3. Click the appropriate user in the **User ID** column.
4. Click SAML Services.

5. Click Add.

6. Under Add SAML Service, do the following:
   a. From the Service menu, select the Confluence service provider.
   b. In SAML Login ID field, select the type of login ID (User ID, E-mail, or Custom) to be sent as a UserID to Confluence in the response.
   c. Click Add.
The user can now authenticate to Confluence using SAML authentication.

Using SAML Provisioning Rules

Use this module to enable groups of users to authenticate to SAML service providers.

1. Log in to the SafeNet Authentication Service console with an Operator account.

2. Click the POLICY tab, and then click Automation Policies.
3. Click the **SAML Provisioning Rules** link.

![Image of SAML Provisioning Rules](image_url)

4. Click **New Rule**.

![Image of New Rule](image_url)

5. Configure the following fields, and then click **Add**:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Rule Name</strong></td>
<td>Enter a name for the rule.</td>
</tr>
<tr>
<td><strong>User is in container</strong></td>
<td>Users affected by this rule must be in the selected container.</td>
</tr>
<tr>
<td><strong>Groups</strong></td>
<td>The <strong>Virtual Server groups</strong> box lists all groups. Click the user groups that will be affected by the rule, and then click the right arrow to move it to the <strong>Used by rule</strong> box.</td>
</tr>
<tr>
<td><strong>Parties</strong></td>
<td>The <strong>Relying Parties</strong> box lists all service providers. Click the service providers that the groups of users will authenticate to, and then click the right arrow to move it to <strong>Rule Parties</strong> box.</td>
</tr>
<tr>
<td><strong>SAML Login ID</strong></td>
<td>Select User ID. The User ID will be returned to the service provider in the SAML assertion.</td>
</tr>
</tbody>
</table>
Running the Solution

Users can log on to Confluence using SAML authentication with SafeNet Authentication Service.
For this integration, the SafeNet GrIDsure token is configured for authentication with the SAS solution.

To log on to your Confluence environment:
6. Open Confluence in a web browser. The user is redirected to the SAS login page.
7. On the login window, enter your user name in the User Name field, and then click Login.

![Login Window](image-url)
8. In the **Password** field, enter the characters that correspond to the configured Personal Identification Pattern (PIP), and then click **Login**.

![Login screenshot](image1.png)

9. After successful authentication, a security warning message is displayed. Click **Continue**.

![Security Warning screenshot](image2.png)

The user is redirected to the default Confluence **Dashboard** page.

![Dashboard screenshot](image3.png)

Support Contacts

If you encounter a problem while installing, registering, or operating this product, please make sure that you have read the documentation. If you cannot resolve the issue, contact your supplier or Gemalto Customer Support. Gemalto Customer Support operates 24 hours a day, 7 days a week. Your level of access to this service is governed by the support plan arrangements made between Gemalto and your organization. Please consult this support plan for further information about your entitlements, including the hours when telephone support is available to you.
