SafeNet Authentication Service
Integration Guide

Using SafeNet Authentication Service as an Identity Provider for Zimbra Webmail Client
All information herein is either public information or is the property of and owned solely by Gemalto NV. and/or its subsidiaries who shall have and keep the sole right to file patent applications or any other kind of intellectual property protection in connection with such information.

Nothing herein shall be construed as implying or granting to you any rights, by license, grant or otherwise, under any intellectual and/or industrial property rights of or concerning any of Gemalto’s information.

This document can be used for informational, non-commercial, internal and personal use only provided that:

- The copyright notice below, the confidentiality and proprietary legend and this full warning notice appear in all copies.
- This document shall not be posted on any network computer or broadcast in any media and no modification of any part of this document shall be made.

Use for any other purpose is expressly prohibited and may result in severe civil and criminal liabilities.

The information contained in this document is provided “AS IS” without any warranty of any kind. Unless otherwise expressly agreed in writing, Gemalto makes no warranty as to the value or accuracy of information contained herein.

The document could include technical inaccuracies or typographical errors. Changes are periodically added to the information herein. Furthermore, Gemalto reserves the right to make any change or improvement in the specifications data, information, and the like described herein, at any time.

Gemalto hereby disclaims all warranties and conditions with regard to the information contained herein, including all implied warranties of merchantability, fitness for a particular purpose, title and non-infringement. In no event shall Gemalto be liable, whether in contract, tort or otherwise, for any indirect, special or consequential damages or any damages whatsoever including but not limited to damages resulting from loss of use, data, profits, revenues, or customers, arising out of or in connection with the use or performance of information contained in this document.

Gemalto does not and shall not warrant that this product will be resistant to all possible attacks and shall not incur, and disclaims, any liability in this respect. Even if each product is compliant with current security standards in force on the date of their design, security mechanisms' resistance necessarily evolves according to the state of the art in security and notably under the emergence of new attacks. Under no circumstances, shall Gemalto be held liable for any third party actions and in particular in case of any successful attack against systems or equipment incorporating Gemalto products. Gemalto disclaims any liability with respect to security for direct, indirect, incidental or consequential damages that result from any use of its products. It is further stressed that independent testing and verification by the person using the product is particularly encouraged, especially in any application in which defective, incorrect or insecure functioning could result in damage to persons or property, denial of service or loss of privacy.

Third-Party Software Acknowledgement

This document is intended to help users of SafeNet products when working with third-party software, such as Zimbra Webmail Client.

Material from third-party software is being used solely for the purpose of making instructions clear. Screen images and content obtained from third-party software will be acknowledged as such.

Description

SafeNet Authentication Service delivers a fully automated, versatile, and strong authentication-as-a-service solution.

With no infrastructure required, SafeNet Authentication Service provides smooth management processes and highly flexible security policies, token choice, and integration APIs.

Zimbra Web Client (ZWC) is a full-featured messaging and collaboration application that offers reliable, high-performance email, address books, calendaring, task lists, and web document authoring capabilities.

This document describes how to:

• Deploy multi-factor authentication (MFA) options in Zimbra Webmail Client using SafeNet OTP authenticators managed by SafeNet Authentication Service.
• Configure SAML authentication in Zimbra Webmail Client using SafeNet Authentication Service as an identity provider.

It is assumed that the Zimbra Webmail Client environment is already configured and working with static passwords prior to implementing multi-factor authentication using SafeNet Authentication Service.

Zimbra Webmail Client can be configured to support multi-factor authentication in several modes. The SAML authentication will be used for the purpose of working with SafeNet Authentication Service.

Applicability

The information in this document applies to:

• SafeNet Authentication Service (SAS)—SafeNet’s cloud-based authentication service
• SafeNet Authentication Service – Service Provider Edition (SAS-SPE)—A server version that is used by Service providers to deploy instances of SafeNet Authentication Service
• SafeNet Authentication Service – Private Cloud Edition (SAS-PCE)—A server version that is used to deploy the solution on-premises in the organization

Environment

The integration environment that was used in this document is based on the following software versions:

• SafeNet Authentication Service – Private Cloud Edition (SAS-PCE) — Mention only if SAS-PCE is relevant. Add version number to the SAS-PCE.
• Zimbra Network Collaboration Suite (zcs-NETWORK-8.5.1_GA_3056.RHEL6_64.20141103151728) on CentOS 6.4 64-bit
Audience

This document is targeted to system administrators who are familiar with Zimbra Webmail Client, and are interested in adding multi-factor authentication capabilities using SafeNet Authentication Service.

SAML Authentication using SafeNet Authentication Service Cloud

SafeNet Authentication Service (SAS) Cloud provides a service for SAML authentication that is already implemented in the SAS Cloud environment and can be used without any installation.

SAML Authentication Flow using SafeNet Authentication Service-SPE and SafeNet Authentication Service-PCE

In addition to the pure cloud-based offering, SafeNet Authentication Service (SAS) comes with two on-premises versions:

- **SafeNet Authentication Service – Service Provider Edition (SPE)**—An on-premises version of SafeNet Authentication Service targeted at service providers interested in hosting SAS in their data center.

- **SafeNet Authentication Service – Private Cloud Edition (PCE)**—An on-premises version of SafeNet Authentication Service targeted at organizations interested in hosting SAS in their private cloud environment.

For both on-premises versions, SAS can be integrated with the Shibboleth infrastructure, which uses a special on-premises agent called SafeNet Authentication Service Agent for Shibboleth.

For more information on how to install and configure the SafeNet Authentication Service Agent for Shibboleth, refer to the SafeNet Support Portal.

SAML Authentication Flow using SafeNet Authentication Service

SafeNet Authentication Service (SAS) communicates with a large number of service providers and cloud-based services solutions using the SAML protocol.

The image below describes the dataflow of a multi-factor authentication transaction for Zimbra Webmail Client.
1. A user attempts to log on to Zimbra Webmail Client. The user is redirected to SafeNet Authentication Service. SAS collects and evaluates the user’s credentials.

2. SAS returns a response to Zimbra Webmail Client, accepting or rejecting the user’s authentication request.

**SAML Prerequisites**

To enable SafeNet Authentication Service (SAS) to receive SAML authentication requests from Zimbra Webmail Client, ensure that the end users can authenticate from the Zimbra Webmail Client environment with a static password.

**Configuring Zimbra Webmail Client**

Add SAS as an Identity Provider in Zimbra Webmail Client. To get the SAS SAML settings for configuring Zimbra Webmail Client, refer to step 4 of “Adding Zimbra Webmail Client as a Service Provider (SP) in SafeNet Authentication Service”, on page 8.

3. Log in to your Zimbra server and run the following commands as a root user:

   ```
   mkdir /opt/zimbra/lib/ext/saml
   cp /opt/zimbra/extensions-network-extra/saml/samlextn.jar /opt/zimbra/lib/ext/saml/
   ```

4. To add the SAML signing certificate (IdP certificate) to the domain, run the following command as the Zimbra user:

   ```
   cat </location/IdP Certificate> |xargs -0 zmprov md <domain > zimbraMyoneloginSamlSigningCert
   ```

   where,
   - `<domain>` is the Zimbra server host name
   - `<IdP Certificate>` is the SAS IdP certificate in base 64 format
   - `/location` is the absolute path of the IdP certificate

5. To specify the Identity Provider login and logout URL on the Zimbra server, run the following commands as the Zimbra user:

   ```
   zmprov md <domain> zimbraWebClientLoginURL <IdP login URL>
   zmprov md <domain> zimbraWebclientLogoutURL <IdP logout URL>
   ```

   where, to support SAML 1.1, the SAS login URL for Zimbra will be:

   - **IdP login URL:**

- IdP logout URL:
  https://<IP of SAS IdP>/idp/signout
  where,
  - <Zimbra SAML extension URL> is <zimbra_base_url>/service/extension/samlreceiver
  - <Zimbra_base_url> is https://<Zimbra Server Host Name>

6. To restart the Zimbra services, run the following commands as a Zimbra user:
   
   zmcontrol stop
   zmcontrol start

---

**Configuring SafeNet Authentication Service**

The deployment of multi-factor authentication using SafeNet Authentication Service (SAS) with Zimbra Webmail Client using SAML authentication requires:

- Synchronizing Users Stores to SafeNet Authentication Service, page 7
- Assigning an Authenticator in SafeNet Authentication Service, page 8
- Adding Zimbra Webmail Client as a Service Provider (SP) in SafeNet Authentication Service, page 8
- Enabling SAML Services in SafeNet Authentication Service, page 12

**Synchronizing Users Stores to SafeNet Authentication Service**

Before SafeNet Authentication Service (SAS) can authenticate any user in your organization, you need to create a user store in SAS that reflects the users that would need to use multi-factor authentication. User records are created in the SAS user store using one of the following methods:

- Manually, one user at a time using the Create User shortcut
- Manually, by importing one or more user records via a flat file
- Automatically, by synchronizing with your Active Directory/LDAP server using the SAS Synchronization Agent

For further details on importing users to SafeNet Authentication Service, refer to “Creating Users” in the SafeNet Authentication Service Subscriber Account Operator Guide:

All SafeNet Authentication Service documentation can be found on the SafeNet Knowledge Base site.
Assigning an Authenticator in SafeNet Authentication Service

SafeNet Authentication Service (SAS) supports a number of authentication methods that can be used as a second authentication factor for users authenticating through Zimbra Webmail Client.

The following authenticators are supported:

- eToken PASS
- RB-1 keypad token
- KT-4 token
- SafeNet GOLD
- SMS tokens
- MP-1 software token
- GrIDsure
- MobilePASS

Authenticators can be assigned to users in two ways:

- **Manual provisioning**—Assign an authenticator to users one at a time.
- **Provisioning rules**—The administrator can set provisioning rules in SAS so that the rules will be triggered when group memberships and other user attributes change. An authenticator will be assigned automatically to the user.

Refer to "Provisioning" in the *SafeNet Authentication Service - Subscriber Account Operator Guide* to learn how to provision the different authentication methods to the users in the SAS user store.

Adding Zimbra Webmail Client as a Service Provider (SP) in SafeNet Authentication Service

Add a Service Provider entry in the SAS *SAML Service Providers* module to prepare it to receive SAML authentication requests from Zimbra Webmail Client. You will need the Issuer ID and Assertion Consumer URL location of Zimbra Webmail Client.

Zimbra does not provide any metadata. To support the Zimbra Browser/POST Profile as per the SAML1.1 specification, you need to create a metadata file for Zimbra using the location URL, provider ID, and a flag that specifies not to validate signatures on the SAML request.

**To create a metadata file for Zimbra:**

Create the Zimbra metadata file (save as .xml) and add the following content:

```
<EntityDescriptor entityID="<zimbra_base_url>/service/extension/samlreceiver " xmlns="urn:oasis:names:tc:SAML:2.0:metadata">
<SPSSODescriptor protocolSupportEnumeration="urn:oasis:names:tc:SAML:2.0:protocol"
AuthnRequestsSigned="false">
<NameIDFormat>urn:oasis:names:tc:SAML:1.1:nameid-format:unspecified</NameIDFormat>
```

To add Zimbra Webmail Client as a Service Provider in SafeNet Authentication Service:

1. Log in to the SafeNet Authentication Service console with an Operator account.

2. Click the COMMS tab, and then click SAML Service Providers.

3. In the SAML Service Providers module, click the SAML 2.0 Settings link.

4. Click Add.
5. Under **Add SAML 2.0 Settings**, complete the following fields:

<table>
<thead>
<tr>
<th>Friendly Name</th>
<th>SAML 2.0 Metadata</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Friendly Name</strong></td>
<td>Enter the Zimbra Webmail Client name.</td>
</tr>
<tr>
<td><strong>SAML 2.0 Metadata</strong></td>
<td>Select <strong>Upload Existing Metadata File</strong>. Click <strong>Choose File</strong>, select the Service Provider’s metadata file created previously, and then click <strong>Open</strong>.</td>
</tr>
</tbody>
</table>

Under **Return Attributes**, add the following attributes, and then click **Apply**:

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td><a href="http://schemas.microsoft.com/ws/2008/06/identity/claims/windowsaccount">http://schemas.microsoft.com/ws/2008/06/identity/claims/windowsaccount</a> name</td>
<td>According to ThirdParty Product Requirements</td>
</tr>

Zimbra Webmail Client is added as a service provider in the system.
Enabling SAML Services in SafeNet Authentication Service

After Zimbra Webmail Client has been added to SafeNet Authentication Service (SAS) as a service provider, the users should be granted permission to use this service provider with SAML authentication.

There are two methods to enable the user to use the service provider:

- Manually, one user at a time, using SAML Services module
- Automatically, by defining groups of users, using SAML Provisioning Rules

Using the SAML Services Module

Manually enable a single user to authenticate against one or more configured SAML Service providers.

1. Log in to the SafeNet Authentication Service console with an Operator account.

2. Click the **ASSIGNMENT** tab, and then search for the required user.

3. Click the appropriate user in the **User ID** column.
4. **Click SAML Services.**

5. **Click Add.**

6. Under **Add SAML Service**, do the following:
   a. From the **Service** menu, select the Zimbra Webmail Client service provider.
   b. In **SAML Login ID** field, select the type of login ID (User ID, E-mail, or Custom) to be sent as a UserID to Zimbra Webmail Client in the response.
   c. Click **Add**.
The user can now authenticate to Zimbra Webmail Client using SAML authentication.

**Using SAML Provisioning Rules**

Use this module to enable groups of users to authenticate to SAML service providers.

1. Log in to the SafeNet Authentication Service console with an Operator account.

2. Click the POLICY tab, and then click Automation Policies.
3. Click the **SAML Provisioning Rules** link.

![Screen Shot](image1.png)

4. Click **New Rule**.

![Screen Shot](image2.png)

5. Configure the following fields, and then click **Add**:

<table>
<thead>
<tr>
<th><strong>Rule Name</strong></th>
<th>Enter a name for the rule.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>User is in container</strong></td>
<td>Users affected by this rule must be in the selected container.</td>
</tr>
<tr>
<td><strong>Groups</strong></td>
<td>The <strong>Virtual Server groups</strong> box lists all groups. Click the user groups that will be affected by the rule, and then click the right arrow to move it to the <strong>Used by rule</strong> box.</td>
</tr>
<tr>
<td><strong>Parties</strong></td>
<td>The <strong>Relying Parties</strong> box lists all service providers. Click the service providers that the groups of users will authenticate to, and then click the right arrow to move it to <strong>Rule Parties</strong> box.</td>
</tr>
<tr>
<td><strong>SAML Login ID</strong></td>
<td>Select User ID. The User ID will be returned to the service provider in the SAML assertion.</td>
</tr>
</tbody>
</table>
Running the Solution

To verify this solution, you need to log on to Zimbra Webmail Client, which uses SAML authentication with SafeNet Authentication Service.

For this integration, SafeNet eToken PASS is configured for authentication with the SAS solution.

1. Open a web browser and enter the Zimbra Webmail Client login URL:

   https://<Zimbra Server Host Name>

   You are redirected to the SAS login page.

2. In User Name field, enter your user name.

3. Generate an OTP using SafeNet eToken PASS and enter it in the Password field. Click Login.

   After successful authentication, the browser is redirected to the default Zimbra mail URL.

Support Contacts

If you encounter a problem while installing, registering, or operating this product, please make sure that you have read the documentation. If you cannot resolve the issue, contact your supplier or Gemalto Customer Support. Gemalto Customer Support operates 24 hours a day, 7 days a week. Your level of access to this service is governed by the support plan arrangements made between Gemalto and your organization. Please consult this support plan for further information about your entitlements, including the hours when telephone support is available to you.
