

PRODUCT BRIEF

Sentinel RMS

The most robust and feature-rich license management solution

Sentinel RMS is the most robust and feature-rich license management solution available on the market. With Sentinel RMS, software and device vendors can create highly-flexible license enforcement policies and deliver a seamless user experience to customers. Sentinel RMS is an ideal solution for application deployment in medium and large-scale environments.

Sentinel RMS enables software and device vendors to enforce complex license agreements and protect software from unauthorized use. The Sentinel RMS solution features a wide range of ready-to-use licensing and product deployment models together with powerful platform extensions including Sentinel cloud licensing, usage tracking and entitlement management capabilities.

Flexible License Models

Deploy a wide range of licensing models to support all of your business needs, now and in the future.

- > **Feature-Based Licensing:** Define license terms for specific features and application modules within a single application.
- > **Pre-Built License Models:** Deploy popular license models, including trials, perpetual, subscription, seat-based, volume, and pay-per-use.
- > **Version Control:** Control how and when customers need to pay for new software features and updates.
- > **Commuter Licensing:** Enable check-out of floating licenses for offline use by remote users.
- > **Time-Based Licensing:** Deliver time restricted licenses including start and expiry dates, duration from first use or cumulative elapsed use
- > **Custom License Models:** Customize models with precise licensing attributes to meet business goals and customer needs.

Seamless User Experience

Deliver a consistent user experience for any type of licensing model and deployment.

- > **Fast and Easy Installation:** Get up and running quickly with no complex configuration or learning curve.
- > **Virtual Machine Licensing:** Create a seamless and transparent user experience when licensed applications run on virtual machines.
- > **Flexible Fingerprinting:** Control how licenses are associated to computer fingerprints.

Features & Benefits

- > **Flexible License Models:** Deploy a wide range of licensing models to cover all your business needs, now and in the future.
- > **Seamless User Experience:** Deliver an intuitive and consistent user experience for any type of licensing model and deployment.
- > **Scalable Licensing:** Deploy a licensing system that scales as your business grows.
- > **Extendable Sentinel Platform:** Expand your licensing platform with integration of additional Sentinel products such as Cloud Licensing, Usage Tracking and Entitlement Management.

Scalable Licensing

Deploy a licensing system that scales as your business grows.

- > **Enterprise Ready:** Deploy a high performance license server to support hundreds of features and thousands of users.
- > **Fully featured API:** Customize and streamline your licensing strategy with a comprehensive set of API functions.
- > **Feature Customization:** Add pre-built interfaces such as custom fingerprinting and license server hooks to extend functionality.
- > **Cross Platform Operability:** Ensure functionality and operability across different platforms and operating systems.

Extendable Sentinel Platform

Expand your licensing platform through the integration of Sentinel Cloud Licensing, usage tracking and Entitlement Management applications.

Cloud Licensing enables you to gain direct real-time control over changes to license policies, such as upgrades, downgrades, and renewals.

- > **Simplify License Distribution:** Distribute new licenses, updates and upgrades automatically via the cloud.
- > **Downgrade and Revoke Licenses:** Ensure secure and seamless reduction of license terms and allowances.
- > **Control Global User Base:** Control the number of concurrent users across multiple independent sites.
- > **Ensure License Compliance:** Support live migration and ensure license enforcement in virtual environments.

Cloud Usage Tracking allows you to collect application usage from worldwide users in real-time and generate usage reports.

- > **Deploy Any Usage Model:** Implement commercial software usage models including Pay Per Use and Post-Pay billing.
- > **Analyze Usage Trends:** Gather usage statistics and gain valuable insight into global customer usage patterns.
- > **Reduce Cost and Complexity:** Reduce complexity and infrastructure costs of traditional usage based deployment.

Entitlement Management

Expand licensing capabilities with powerful entitlement management features from Sentinel EMS.

- > **Automate Activation:** Enable automatic activation of applications.
- > **Simply User Experience:** Utilize transparent exchange of fingerprints and license codes.
- > **View Audit:** Record the history of activation transactions.
- > **Automate Renewals:** Make sure licenses are updated on time with automate subscription renewals.

Platform Capabilities

Deploy a fully automated license fulfillment, delivery, tracking, and reporting solution with seamless integration to back-office applications.

- > **Platform Compatibility:** Support for all major operating systems and compilers to ensure consistent licensing across all platforms.
- > **Security Mechanisms:** Choose any type of security method to protect products, enforce software licenses in any network environment.
- > **Quality of Service:** Use "Grace-Period" licensing to overcome a sudden or temporary loss of network connectivity.
- > **High Availability:** Deploy redundant Licensing Servers to ensure continuous use and no disruption of services for licensed applications and users.
- > **Virtual Machines:** Protect against license violations and enforce license policies in virtual environments. Implement license enforcement policies for detected virtual machines and provide a high level of assurance for node-locks on virtualized hosts.

Sentinel Licensing Methodology

Sentinel products are backed by a solid, field-proven licensing methodology designed to reduce development effort and ensure fast-time-to-market for different license models, product variants, and deployment methods.

Contact Us: For all office locations and contact information, please visit www.gemalto.com/software-monetization

 GEMALTO.COM

Sentinel separates the software protection process from the business process of licensing which enables you to define new products with no development effort.

Methodology:

Protect Once: Define parameters once as part of the license, to reduce configuration of your applications during implementation.

Deliver Many: Deliver the same software package to individual users or across thousands of enterprise domain users, with no dependence on new product engineering.

Evolve Often: Adjust the license policy for different customers, market verticals, and regions.

How it Works:

Parameter Configuration: Define parameters as part of the license, to reduce configuration of your applications during implementation.

Single Code Build: Support multiple feature builds and release versions with a single code build.

License Fulfillment: Generate license models at fulfillment for the distribution channel with no time-consuming development or configuration.

About Gemalto Sentinel

Gemalto is the market-leading provider of software licensing and entitlement management solutions for on-premises, embedded, and cloud-based software vendors. Gemalto Sentinel is the most trusted brand in the software industry for secure, flexible, and future-proof software monetization solutions.
