As more organizations adapt to today’s mobile workforce, they need to offer a secure VPN access strategy that allows users to access the enterprise network anytime, anywhere from any device. Two-factor authentication provides the first layer of security for remote access, ensuring that employees accessing the corporate network remotely via VPN are who they claim to be.

**Dell SonicWALL and Gemalto – Anytime, Anywhere Secure Remote (VPN) Access**

Dell SonicWALL and Gemalto SafeNet Authentication Solutions work together to provide a comprehensive solution for secure remote access. Dell SonicWALL Secure Remote Access (SRA) appliances extend corporate applications, data, and resources via policy-enforced SSL VPN to mobile workers on any device without compromising security. Encrypted SSL VPN tunnels secure data as it is transmitted to mobile employees. As an added layer of protection, granular access controls, managed from a single console, allow the administrator to set role-based policies for end users of mobile devices with a single rule across objects.

**Ensuring Identities with SafeNet Authentication Solutions**

Gemalto’s SafeNet two-factor authentication solutions replace the use of static passwords with a dynamic one-time password that ensures the identities of employees logging on to the network remotely via Dell SonicWALL.

By adding Gemalto’s SafeNet strong authentication to Dell SonicWALL Secure Remote Access (SRA) appliances, organizations are able to secure remote access from any device as well as any location – reducing the vulnerabilities of passwords and ensuring identity integrity.

Gemalto SafeNet Authentication Service delivers fully automated, strong authentication-as-a-service. With no infrastructure required, providing smooth management, highly flexible security policies and broad token choice.

**Key Benefits**

- **Optimized, layered security**
  - Protect critical resources by ensuring that only authorized users log in through Dell SonicWALL VPNs
- **Organizational efficiencies**
  - Secure access from any device with automated workflows that reduce IT management
- **Out-of-the-box integration**
  - SafeNet authentication solutions provide pre-tested seamless setup with the entire Dell SonicWALL Secure Remote Access (SRA) portfolio.

**Out-of-the-Box SAML Integration with Gemalto SafeNet Authentication Service**

Gemalto SafeNet Authentication Service (SAS) provides a service for SAML authentication that is already implemented in the SAS Cloud environment and can be used without any installation.

**Award-Winning Authentication Solutions from Gemalto**

Gemalto SafeNet Authentication Service (SAS) delivers fully automated, highly secure, cloud-based authentication-as-a-service for enterprises and service providers. With support for a wide breadth of authentication methods, Gemalto’s SafeNet Authentication Service secures access to a broad IT ecosystem, including SaaS applications, VDI, web portals, and local networks. SafeNet Authentication Service offers streamlined management and shared services with its multi-tier, multi-tenant environment and automated workflows, making secure access in cloud and mobile environments quick to implement and simple to manage.
Gemalto SafeNet Authentication Solution

Gemalto offers Next-Generation Authentication Solutions that protect identities and ensure that individuals are who they claim to be. With automated administration, and user and token management, Gemalto’s SafeNet solutions support the broadest range of authentication methods and extend identities beyond the enterprise with federated login to cloud applications. Gemalto’s SafeNet solutions streamline authentication across an organization’s IT ecosystem with unified, centrally managed access policies—managed from one authentication back end, delivered in the cloud or on-premises.
